Roller Coaster Loop the Loop : Students check out laptops and load this animation through the web browser.

They then answer a series of questions like, what is the period of motion, (measured with a stopwatch while watching the animation), calculate the tangential velocity, centripetal acceleration and g's felt by the rider and the bottom and top of the loop.

### **Physics Teacher Resources - mrwaynesclass.com**

In physics, a force is any interaction that, when unopposed, will change the motion of an object. A force can cause an object with mass to change its velocity (which includes to begin moving from a state of rest), i.e., to accelerate. Force can also be described intuitively as a push or a pull. A force has both magnitude and direction, making it a vector quantity.

### **Force - Wikipedia**

In general, an orbital resonance may involve one or any combination of the orbit parameters (e.g. eccentricity versus semimajor axis, or eccentricity versus orbital inclination). act on any time scale from short term, commensurable with the orbit periods, to secular, measured in  $10^4$  to  $10^6$  years.; lead to either long-term stabilization of the orbits or be the cause of their destabilization.

### **Orbital resonance - Wikipedia**

These operators will "operate" on a wave function,  $\Psi$ , which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system. We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.
