In theoretical computer science, the  $\pi$ -calculus (or pi-calculus) is a process calculus. The  $\pi$ -calculus allows channel names to be communicated along the channels themselves, and in this way it is able to describe concurrent computations whose network configuration may change during the computation.. The  $\pi$ -calculus is simple, it has very few terms and so is a very small language (see #Syntax ...

This is a list of bottle types, brands and companies. A bottle is a rigid container with a neck that is narrower than the body, and a "mouth". Bottles are often made of glass, clay, plastic, aluminum or other impervious materials, and are typically used to store liquids. The bottle has developed over millennia of use, with some of the earliest examples appearing in China, Phoenicia, Rome and Crete.

La fibre optique est un guide d'onde qui exploite les propriétés réfléchissantes de la lumière. Elle est

habituellement constituée d'un cœur entouré d'une gaine. Le cœur de la fibre a un indice de réfraction généralement plus élevé (différence de quelques millièmes) que la gaine et peut donc confiner la lumière qui se trouve entièrement réfléchie de multiples fois à l'interface ...
