linear partial differential equations pdf

In mathematics, a partial differential equation (PDE) is a differential equation that contains beforehand unknown multivariable functions and their partial derivatives. PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a computer model. A special case is ordinary differential equations (ODEs), which deal with functions ...

In mathematics, a linear differential equation is a differential equation that is defined by a linear polynomial in the unknown function and its derivatives, that is an equation of the form $y'' + a_1 y' + a_0 y = f(x)$, where $f(x)$, a_1 , and a_0 are arbitrary differentiable functions that do not need to be linear, and y'' , y' , are the successive derivatives of an unknown function y of the variable x .
