There are multiple OSPF Network Types that can be configured to directly affect the operation of OSPF on a specific interface. This lab will discuss and demonstrate the configuration and verification of the different OSPF Network Types.

The Open Shortest Path First (OSPF) protocol, defined in RFC 2328, is an Interior Gateway Protocol used to distribute routing information within a single Autonomous System. This paper examines how OSPF works and how it can be used to design and build today's large and complicated networks.
