Computational chemistry is a branch of chemistry that uses computer simulation to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids. It is necessary because, apart from relatively recent results concerning the hydrogen molecular ion (dihydrogen cation ...

Restriction Enzymes. The phenomenon of restriction and modification was first observed genetically in 1952-1953 by Luria and Human (7) and Bertani and Weigle (8), although they referred to it as host-induced, or host-controlled, variation. The authors observed that several different bacteriophages varied in their ability to grow on different host strains.
