Audio circuits to build. The following links to circuit diagrams and building projects I have found from other web sites. I have tested only very few of them so there is no guarantee that those circuit will work as expected.

CXA1019 FM RADIO. CXA1019 is a one-chip FM/AM radio IC designed for radio-cassette tape recorders and headphone tape recorders, and CXA1019S has the following functions.

### **CXA1019 FM Radio Circuit Diagram | Electronic Circuits**

The A250 is a hybrid state-of-the-art Charge Sensitive Preamplifier for use with a wide range of detectors having capacitance from less than one, to several thousand picofarads.

6418 Valve (Tube) RIAA Phono Preamplifier Kit. Last year I built and reviewed the low cost Oatley Electronics K272 Tube Stereo Headphone Amplifier Kit. In conversation with Oatley Electronics (located in New South Wales Australia), they told me that the kit became very popular and sold pretty much all over the world.

Tone control circuit. This is just another circuit designed by Mr. Seetharaman Subramanian and time it is a high quality passive tone control circuit that has an overall gain of around 25 with 20dB boost and cut.

### **A quality tone control circuit using opamp and few passive**

RIAA equalization is a specification for the recording and playback of phonograph records, established by the Recording Industry Association of America (RIAA). The purposes of the equalization are to permit greater

recording times (by decreasing the mean width of each groove), to improve sound quality, and to reduce the groove damage that would otherwise arise during playback.

### **RIAA equalization - Wikipedia**

All direct-coupled circuitry designed with DC servo configuration for straight and pure signal transmission from MC input to speaker outputs. Outstanding Low impedance drive capability as low as 2 ohms.

Infrasound is simply sound below the human's hearing range, typically below 20 Hz. At such low frequency a true sound wave causes the local pressure to go up and down and is distinguished from air movement.

20 Mar/Apr 2003 8900 Marybank Dr. Austin, TX 78750 ac5og@arrl.net A Software Defined Radio for the Masses, Part 4 By Gerald Youngblood, AC5OG We conclude this series with a description of a dc-60 MHz transceiver that will allow open-software experimentation

### **A Software Defined Radio for the Masses, Part 4**

Feed line loss is specified in dB per some length (100 feet or 100 meters is common) at a particular frequency. Antenna gain is given in dB, usually compared to an isotropic or dipole antenna.

### **A Tutorial on the Decibel - American Radio Relay League**

Although the range of equalization functions is governed by the theory of linear filters, the adjustment of those functions and the flexibility with which they can be adjusted varies according to the topology of the circuitry and controls presented to the user. Shelving controls are usually simple first-order filter functions which alter

the relative gains between frequencies much higher and ...
