"Molecular Structure of Nucleic Acids: A Structure for Deoxyribose Nucleic Acid" was the first article published to describe the discovery of the double helix structure of DNA, using X-ray diffraction and the mathematics of a helix transform. It was published by Francis Crick and James D. Watson in the scientific journal Nature on pages 737–738 of its 171st volume (dated 25 April 1953).

In molecular biology, DNA replication is the biological process of producing two identical replicas of DNA from one original DNA molecule. This process occurs in all living organisms and is the basis for biological inheritance. The cell possesses the distinctive property of division, which makes replication of DNA essential. DNA is made up of a double helix of two complementary strands.

With reduced risk of toxicity and high selectivity, covalent small-molecule kinase inhibitors (CSKIs) have emerged rapidly. Through the lens of structural system pharmacology, here we review this rapid progress by considering design strategies and the challenges and opportunities offered by current CSKIs.

2 Using variation in point estimates to model uncertainty The literature on the Drake equation contains dozens of point-estimate based calculations for N (the number of detectable civilizations in our galaxy).² These estimates span 11 orders of magnitude: from 3×10^4 to 1×10^8 . While each

With regard to the concatenation of nucleotides to oligonucleotides there is progress as well. The polymerization of chemically-activated RNA monomers can take place on the mineral surfaces of montmorillonite clay, generating polymer chains of up to 50-mers (Huang and Ferris 2006). The pyrimidine ribonucleotide monomers from the new synthesis (Powner et al. 2009) are also activated (they ...
