It has been developed by the multi-disciplinary Scottish Adverse Childhood Experiences Hub, hosted by NHS Health Scotland. Guidance has already been provided by the Scottish Government, Education Scotland and from local authorities

Tackling the attainment gap by preventing and responding to

ACEs can cause stress reactions in children, including feelings of intense fear, terror, and helplessness. When activated repeatedly or over a prolonged period of time (especially in the absence of protective factors), toxic levels of stress hormones can interrupt normal physical and mental development and can even change the brain's architecture.

The prevalence of adverse childhood experiences

STATISTICS. 60% of adults report experiencing abuse or other difficult family circumstances during childhood. (1) 26% of children in the United States will witness or experience a traumatic event before they turn four. (1) Four of every 10 children in American say they experienced a physical assault during the past year, with one in 10 receiving an assault-related injury.

The science of early brain development can inform investments in early childhood. These basic concepts, established over decades of neuroscience and behavioral research, help illustrate why child development—particularly from birth to five years—is a foundation for a prosperous and sustainable society.

InBrief: The Science of Early Childhood Development

Metal toxicity or metal poisoning is the toxic effect of certain metals in certain forms and doses on life. Some metals are toxic when they form poisonous soluble compounds. Certain metals have no biological role, i.e. are not essential minerals, or are toxic when in a certain form. In the case of lead, any measurable amount may have negative health effects.

Metal toxicity - Wikipedia

Mercury poisoning is a type of metal poisoning due to exposure to mercury. Symptoms depend upon the type, dose, method, and duration of exposure. They may include muscle weakness, poor coordination, numbness in the hands and feet, skin rashes, anxiety, memory problems, trouble speaking, trouble hearing, or trouble seeing. High level exposure to methylmercury is known as Minamata disease.
