understanding color in photography pdf

Understanding Color & Light. Light is the single basic ingredient required to create photographs. Without light, pictures don't exist. Digital photography is the process of transferring light energy, carried by photons, into digital information, which can be processed and displayed by computers and cameras in the form of digital images.

Photography is the art, application and practice of creating durable images by recording light or other electromagnetic radiation, either electronically by means of an image sensor, or chemically by means of a light-sensitive material such as photographic film. It is employed in many fields of science, manufacturing (e.g., photolithography), and business, as well as its more direct uses for art ...

Questions? Email the staff at staff@dme10.org or tweet us at @expodigipho. The Exhibition page showcases the staff-selected finalists of photographs from Project 4 submissions.. Congratulations to the students of the fall 2015 version of Digital Media E-10 for completing the course!

DGMD E-10: Exposing Digital Photography

Color printing or colour printing is the reproduction of an image or text in color (as opposed to simpler black and white or monochrome printing). Any natural scene or color photograph can be optically and physiologically dissected into three primary colors, red, green and blue, roughly equal amounts of which give rise to the perception of white, and different proportions of which give rise to ...
