In the Principia, Newton proved that if gravity acts as an inverse-square law force, the trajectory of a planet or comet is a conic section (i.e. circle, ellipse, parabola, or hyperbola).

Essay: Newton vs. Einstein vs. the Next Wave. According to his theory of General Relativity, gravity is much weirder: a natural consequence of a massâ€™s influence on space. Einstein agreed with Newton that space had dimension: width, length, and height. Space might be filled with matter, or it might not.

From Einsteinâ€™s thought experiments, we now have a much better understanding of what gravity is. Gravity isnâ€™t some mysterious force that pulls us to the Earthâ€™s surface. Rather, gravity is the curvature of space around an object of mass.

The Nature of Gravity As Explained by Albert Einstein

Max Planck to Albert Einstein, on learning that Einstein was attempting to find a new theory of gravity to resolve the conflict between special relativity and Newtonian gravity (1913). Every civilization has been fascinated by notions of Space (the Heavens) and Time (the Beginning, the Change and the End).

Space and Time: From Antiquity to Einstein and Beyond

Newton described the force of gravity (F_g) acting between two masses (M_1 & M_2) as follows: where R is the distance separating the two masses and G is the gravitational constant (just a constant number).

Understanding gravity - from Newton to Hawking The most important publication in the history of science â€œ Isaac Newtonâ€™s own annotated copy of Principia Mathematica â€œ and other seminal works by Copernicus, Einstein and Stephen Hawking, feature in a new film, released today, celebrating 600 years of Cambridge University Library.

Understanding gravity - from Newton to Hawking

Gravity is the curvature of spacetime. It is here that Einstein connected the dots to suggest that gravity is the warping of space and time. Gravity is the curvature of the universe, caused by massive bodies, which determines the path that objects travel. That curvature is dynamical, moving as those objects move.

Understanding gravityâ€™s warps and ripples in space and time

Universal implications. Einstein quickly realized (or had known all along) that his new theory of gravity was really a theory of the cosmos. In 1917, he wrote a famous paper applying general relativity to the universe as

a whole. Today that paper stands as the foundation for modern cosmology.

Einstein's genius changed science's perception of gravity

5 Answers. Without that force (gravity) objects will continue in a straight line. Where Newton's idea of Gravity is 3D space with Time a constant, Einstein conceived of 4D space -- called space-time. In this structure, time is not absolute but a dimension or variable in the structure such that (x,y,z,t) exist for a given event.
