vlsi synthesis of dsp pdf

High-level synthesis (HLS), sometimes referred to as C synthesis, electronic system-level (ESL) synthesis, algorithmic synthesis, or behavioral synthesis, is an automated design process that interprets an algorithmic description of a desired behavior and creates digital hardware that implements that behavior. Synthesis begins with a high-level specification of the problem, where behavior is ...

High-level synthesis - Wikipedia

Loquendo was a multinational computer software technology corporation, headquartered in Torino, Italy, that provides speech recognition, speech synthesis, speaker verification and identification applications. Loquendo, which was founded in 2001 under the Telecom Italia Lab (formerly, CSELT), also had offices in United Kingdom, Spain, Germany, France, and the United States.

Loquendo - Wikipedia

This page contains the complete set of materials for my FPGA & Verilog design course which I taught in Isfahan University of Technology, 2010.

To improve resource usage, there are several ways of compressing models to smaller sizes, such as gaining sparsity of network connections and narrowing data bit-width , , .Binarization is a promising method to compress the NN models, which can directly shrink the bit-width of inputs and weights from 32 bit (single-precision floating-point) to a single bit.
