Scotland â€œ was just about 11% of the total possible of 2,430 MW. On 30 Dec 2010 UK's 3,000 operational wind turbines produced only 0.04% of the countryâ€™s power. There were days when the contribution from Scotland's forests of wind turbines was precisely nothing. At times it was even worse than that.

### **Why Wind Won't Work? it's Weaker than Water.**

Wind power plants, or wind farms, are clusters of wind turbines used to produce electricity. A wind farm usually has dozens of wind turbines scattered over a large area. Choosing the location of a wind farm is known as siting a wind farm. The wind speed and direction must be studied to determine where to put the turbines.

distribution, the standard parameteric model of the pdf of wind speeds. In other words, the Weibull distribution generally underestimates wind speed extremes at night. A number of regional climate models (RCMs) considered in this earlier study were not able to reproduce this diurnal cycle in the surface wind speed pdf.
