Millimeter-Wave MIMO Architectures for 5G Gigabit Wireless

In radio communications, a radio receiver, also known as a receiver, wireless or simply radio is an electronic device that receives radio waves and converts the information carried by them to a usable form. It is used with an antenna. The antenna intercepts radio waves (electromagnetic waves) and converts them to tiny alternating currents which are applied to the receiver, and the receiver ...

A wireless distribution system (WDS) is a system enabling the wireless interconnection of access points in a WiFi network. It allows a wireless IEEE 802.11 network to be expanded using multiple access points without the traditional requirement for a wired backbone to link them. The notable advantage of WDS over other solutions is that it preserves the MAC addresses of client frames across ...
